

## Post hoc descriptive analysis; no inferential test

### Most variation is prompt-by-direction

### Per-direction means track their predictions

Conceived after the preregistered result was observed and reported as description only. Left: a balanced two-way partition of the 32 x 16 final-test outcomes; the three shares sum to 100 percent by construction. Right: one point per signed direction, 32 prompts each. Labels are truncated opaque identifiers. No interval, no test, no p-value.
